EXTRADA KAYAKS

Our Commitment

EXTRADA KAYAKS is committed to serving our Customers and the Water Sports Industry with Focus on Customer Service, Quality Products at Competitive Pricing.

We hold ourselves and our products to the Highest Safety and Environmental Standards while giving you the adventure of living life to the fullest.

Our Why

At **EXTRADA KAYAKS**, we believe in promoting access to water and water sports as a source of balance in life, whether its done as an individual, with your family or in a group, we help you discover the harmony that binds the body and soul with nature to make the memories that last a lifetime.

The more people we can introduce to aquatic activities, the more people will appreciate and understand the need to protect it for further generations.

Environment Awareness

At **EXTRADA KAYAKS**, we believe in doing our part to raise awareness to protect our oceans, waterways and aquatic ecosystems. All of our products are Eco-Designed for minimum impact on the environment and 100% recyclable.

Sustainable Development: A Major Priority

The **EXTRADA KAYAKS** manufacturing processes priority is doing our part in preserving the environment. We recycle wherever possible, eliminating gas emissions and conserving energy and water.

Eco-Design and Environmental Awareness

- No Pollution
 - No Gas Emissions
 - No Solvents
- 100% Recyclable
 - Surplus material systematically recycled back into the production process
- All kayaks and canoes can be entirely recycled at the end of their life-cycle.
 - They can be crushed and recycled for other usage.
- Resource Conservation
 - Low Energy Consumption
 - Short Production Cycle

EXTRADA KAYAKS

Our roots are in outdoor adventures and we're known to be a bunch of adventure junkies. **EXTRADA KAYAKS** was founded on the principal of having fun, enjoying life and enjoying the adventures where life takes you. What better way to experience an adventure than a kayak?

EXTRADA KAYAKS is quickly becoming one of the fastest growing kayak and canoe brands in the world, known for extreme quality boats and gear for the individual adventure. We're also becoming the first choice for Resorts, Tour Operators and Charter Companies. Our Coral Reef Explorer™ Kayak/Canoe being the most popular and a heads turner on the Andaman Sea. It's better than being at an aquarium, you can observe the sea life and view the reefs while looking through the boat. This canoe is great for families and people of all ages and abilities.

Our kayak product line is known for extremely rugged boats that will withstand the tropical environments and the abuse of daily use. All boats are made to ISO Standards and are CE Certified, giving you all the confidence to tackle the waves while exploring the oceans. The kayaks are great for rivers and lakes, anywhere your imagination can take you.

Before **EXTRADA KAYAKS** started manufacturing kayaks, our in house Research and Design studio comprising of engineering and design teams spent a many hours in design meetings and the results are presented in this catalog.

The challenges for the team was three fold, to manufacture the best quality kayak with personal safety at the forefront, a cost efficient kayak which could be sold at the most compleutive price while having the least impact on the environment.

SAFETY AND QUALITY

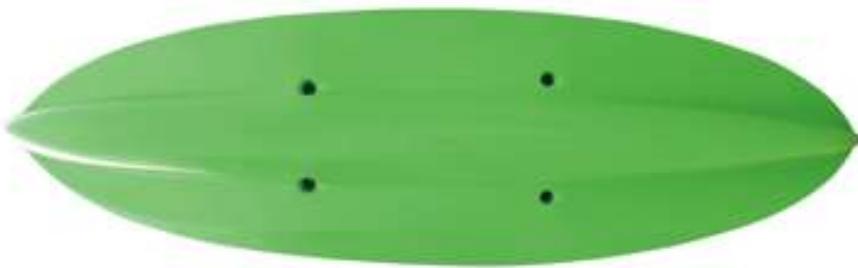

With personal safety at the forefront, all **EXTRADA KAYAKS** are built using marine grade stainless steel screws with custom designed attachments for all fasteners and holding points. Many manufactures use standard rivets which corrode (rust) in a short period of time and become loose and work their way out causing the fittings to fail and come off.

Another key feature for the quality and safety of the **EXTRADA KAYAKS**, all hulls are 5 mm thick maintaining light weight for maneuverability and performance and provides durability for withstanding hard impacts. Heavier kayaks have buoyancy and stability problems which in turn could put your safety at risk while lighter thickness kayaks will not hold up to impacts, very likely to crack or break in the event of an impact with rocks.

Hull Design

The **Mono-Hull Longboard Design** provides excellent maneuverability while retaining maximum stability making it perfect for playing in the surf. Combining both a Surfboard (Longboard) with a Mono-Hull Sail Boat Design, this shape features a large central section that slices through the water giving the boat maneuverability like a sail boat and the stability of a Longboard.

This makes a full day of kayaking enjoyable causing less fatigue for the kayaker while providing hours of fun. We use this design on our Sport Series.

The **Triple Hull Design** provides excellent maneuverability while retaining maximum stability without slowing its forward speed. Based off the shape of a trimaran construction, the shape features a large central section with narrow water channels to optimize glide and two outer hull sections that give the boat stability. The two concave sections improve the overall performance.

This makes a full day of kayaking enjoyable causing less fatigue for the kayaker enabling you to explore more places.

Triple Hull Design

COST EFFICIENT

The vast majority of sit on top kayaks are made from LLDPE (Linear Low Density Polyethylene) and so are ours. There are kayaks on the market made from other materials including HDPE (High Density Polyethylene). HDPE is the densest and most common variant of Polyethylene and is widely used in applications from bottle caps to plastic garden furniture. Although HDPE is stronger, it also has a lower impact strength (more brittle) than LLDPE meaning when it gets hit it is more likely to crack or break.

Using LLDPE means that should you drop your kayak or crash into rocks, instead of cracking and totally ruining your kayak (as compared with using HDPE), all that could happen is the hull may dent slightly and this can often be pushed back using a little heat.

Kayaks manufactured with LLDPE have been thoroughly tested using the standard test known as the Izod Impact Strength Test (Courtesy Wikipedia). The ASTM International Standard for Izod Impact Testing of plastics is ASTM D256. The lower stiffness value of LLDPE is slightly more malleable (Resistant to Impact) with excellent memory properties. This means in case of damage, the natural form of the kayak will return to the original form. LLDPE also provides higher UV and chemical resistance greater than HDPE.

Another cost savings process we use in the manufacturing of **EXTRADA KAYAKS** is Rotational Molding (Roto-Mold) which offers design advantages over other molding processes. Using a proven design, parts assembled from several pieces can be molded as one part, eliminating high fabrication costs. The principle; two slabs (Deck and Hull) are heat-molded in an aluminum mold then pressure-fused together. The product is then cooled and taken for finishing in the workshops.

The molds require less tooling; they can be manufactured and put into production much more quickly than other molding processes.

The design strength of the process also provides for consistent wall thickness with strong outside corners that are virtually stress free. With the uniform thicknesses achieved, large stretched sections are nonexistent creating a 5mm wall thickness throughout the kayak. The process allows us to add prefinished pieces (Metal Threads) to the mold which provides another large advantage.

ENVIRONMENTAL IMPACT

The final challenge faced by the **EXTRADA KAYAKS** Design Team was how to have the least impact on the environment.

Our manufacturing technique has a low energy requirement, is non-polluting, and allows us to re-cycle and re-use all the off-cuts the production runs generate. We also designed the kayak to be recyclable at the end of its life.

Another cost advantage with rotational molding is the minimal amount of material wasted in production. There are no sprues or runners (as in injection molding), no off-cuts (thermoforming), or pinch off scrap (blow molding). What material is wasted, through scrap or failed part testing, can be recycled.

For responsible end-of-life management, Plastics Europe recommends recycling (whether mechanical or feedstock) as far as economically feasible and environmentally sensible.

LLDPE is normally identified by Recycling Code 4.

KAYAK SAFETY

From all of us at **EXTRADA KAYAKS**, we want everyone to have fun and Discover Water. At the same time, we want to remind everyone to Be Safe while having a good time on the water.

As with all recreational activities, there is always the possibility of injury or death. Always use common sense and follow all safety rules at all times.

Be aware of weather conditions and water temperature. Prepare for changes in weather and the possibility of capsizing. If paddling in cold water, a wet suit or dry suit can keep you warm and comfortable. In warm weather, a long sleeve shirt can provide sun protection.

Invest in appropriate clothing for your climate and dress for the day.

Beware of off-shore winds that make it difficult to return to shore.

Always follow the boating rules of the area you're in.

Never mix alcohol or drugs (prescription or non-prescription) with kayaking.

Never exceed the weight capacity of your boat and always check your equipment for wear and tear before you paddle.

Seek qualified instruction to learn proper paddling techniques, water safety and basic first aid.

Brush up on self-rescue first in calm, warm, shallow water, and again in more extreme conditions.

Most importantly, WEAR YOUR PERSONAL FLOATATION DEVICE. Coast Guard regulations require that all kayaks have a lifejacket on board. Wearing your lifejacket will help keep your head above water and add insulation to your body, keeping you warmer in cold water. There are great PFDs designed specifically for paddlers. Buy one that fits well, and always wear it while you paddle.

Tell someone your paddle plan, which includes: where you are going, what you will be doing, how long you expect to be gone and how many people are in your party. Then stick to your plan.

Paddling in the surf zone or in rivers can be dangerous. Always wear a helmet.

Stay hydrated. Always bring plenty of water and food.

When paddling in a new area, check with the locals regarding currents, shoreline conditions and weather patterns. Plan an "escape" route - an alternative place to get off the water should environmental conditions dictate it. Abiding by these rules will help to make your kayak adventure safer and fun.

Suggested Gear to Take With You

Personal Flotation Device

Previously mentioned, otherwise known as a PFD or lifejacket, a personal flotation device is an absolute requirement for all paddlers. Even the most experienced canoeists, kayakers, and swimmers need to wear their PFD as it is very possible to be in a situation where you can't get to shore, you may be unconscious or injured, or get caught in debris.

Helmet or Hat

The type of paddling you will be doing will dictate what type of head covering you will need. Whitewater paddlers must wear an approved helmet. Other types of paddlers should wear a hat with a brim. This will shield them from the damaging effects of the sun on hot days as well as help them retain their body heat on cold days.

Proper Footwear

Weather and condition appropriate closed-toe footwear should be worn. Neoprene socks and booties are great for cold water paddling. Old sneakers, water shoes, or closed toe sandals work well in warm conditions. In either case, you want to make sure that you are wearing good foot protection in case you end up in a situation where you are required to walk. Rocks, shells, sea life, and even glass have caused frequent injuries to unsuspecting paddlers because they weren't wearing proper footwear while canoeing and kayaking.

Paddling Whistle or Air Horn

So easy and inexpensive to carry a good canoeing whistle that it just doesn't make sense not to. When you get in trouble while on the water, it is nearly impossible to yell and have anyone hear you. It is only with a special whistle made for canoeing or kayaking that you will be heard. Air horns are a more expensive alternative but also work great. Be sure to attach your paddling whistle right to your PFD so it is with you at all times. An inexpensive An Air Horn is another option to carry as the sound of the horn will travel farther than a whistle.

Water and Snacks

Even if you are only going to be in your canoe or kayak for a short period of time, it is essential to bring a full water bottle with you. It is quite common for paddlers to become dehydrated due to the combined effect that the sun and wind have on the body. Also, you will be expending a lot of energy even if you don't realize it, so be sure to bring a snack so you don't get light-headed from hunger.

Dry Bag
Paddlers should have a dry bag securely fastened to the boat. The dry bag should include a variety of things you think you may need which may include some form of identification, food, first aid kit, phone or 2-way radio, dry shirt, towel, and a map to name a few.

Rope Throw Bag
A rope throw bag is a rescue device that can be thrown to a swimmer with the intent of pulling them to safety. It can also be used to tow another canoe or kayak to shore if needed. You never know what other uses you will find for a rope while in nature.

Knife
Whenever you are dealing with the possibility of using a rope, you should always carry a knife. Paddling knives are often designed to be clipped to your PFD so that they are easily accessible. It's amazing how many other uses you'll find for your knife while on canoe and kayak trips.

First Aid Kit
You can make your own first aid kit or buy one of the convenient pre-packed ones that are available in most stores. This can be kept in your dry bag or in a dry box if you keep one onboard.

Sun Protection
Sunglasses, sunscreen, and lip balm should be worn even on cold days when the sun is out. It's amazing how exposure to the sun while out on the water can really have damaging effects on your body even when it isn't that hot out. The lip balm will also help protect you from unnecessary discomfort caused by the wind.

Note:
If you have any questions, please contact us and we will be happy to share our experience and recommendations with you.

We recommend seek qualified instruction prior to the use of your kayak including use, water safety and navigation.

Due to the unique nature of water sports, **EXTRADA KAYAKS** cannot be liable for any accidents or damages incurred by the user. The end user agrees to assume all liability for their actions while using said products.

OUR MODELS

THE EXTRADA SERIES

Our selection of **EXTRADA KAYAKS** are designed for the explorer in you. Face it, there's an explorer in all of us and the **EXTRADA KAYAK** range has a model to fit any explores needs. Our new designs combined with the state of art manufacturing process has produced some of the top kayaks on the market today.

Exceeding standards of kayaks more than double the price, the **EXTRADA KAYAK** Line is the most economic value of kayaks on the market today. Combined with our 1 year warranty on craftsmanship, you will be hard pressed to find a comparable kayak in quality at this price range.

The extended line of the **EXTRADA KAYAKS** Models include the **EXTRADA GAIETY**, the perfect kayak for a day at the beach; small, lightweight and can be used as a swimming pool to just relax. Designed for small adults or children, this is the perfect introductory kayak at a very low price.

Our Sport Series include the **EXTRADA SPORT** and **EXTRADA SURF**. These Sport Kayaks are fun kayaks for playing around in the surf which makes them a popular model for beach rentals. The maneuverability makes the beginner feel like they have been kayaking for years.

The Adventure Series starts with our single seat **EXTRADA** model, great kayak for intermediate kayakers at an affordable price. Versatile enough for individual owners and extremely popular with resorts and charter companies, the **EXTRADA** can take a beating.

The **EXTRADA ESCAPE** is a two seat version of the **EXTRADA**, made for taking a companion along on your venture.

The **EXTRADA TOURING** is perfect for 2 adults and a child or even take a dog along. With the Tri-Mar, you can cover a lot of nautical miles for exploring areas boats can't get to.

The **EXTRADA ASEAN** has room for 3 adults, room for gear and is a perfect overnight kayak for when you just want to get away for a few days. Equipped with 2 back rests, this is perfect get away model with plenty of storage space.

The **EXTRADA FISHING** is geared toward the serious fisherman. This single seat kayak can store plenty of gear including holding multiple fishing rods at once.

Most Models in the **EXTRADA KAYAKS** Line can be equipped with fishing rod holders, all come with bungee cord for storing gear while on your adventure, paddled holder cords for storing the paddle when you want to take a break and enjoy the sites of where you are. All models have hatches included to give you more additional storage. The modular design of the kayaks allows for customization to create the kayak that meets your needs.

Note: Options limited for the **EXTRADA GAIETY, EXTRADA SPORT, EXTRADA SURF**. Options available at additional price.

EXTRADA ASEÄ shown with Optional Seats

The **EXTRADA ASEÄ** is the perfect kayak for expeditions or extended touring. This family oriented three (3) seat Sit On kayak with innovative features giving you the flexibility of solo use equal to the paddling comfort as a double or single seat kayak.

With the ample storage areas, it's easy to plan overnight trips and will fit three adults comfortably while holding a lot of gear. Comes with two built in back rests and easy outfitted for additional back rests.

The **EXTRADA ASEÄ** is a fast kayak enabling you to travel greater distances with less fatigue enabling you to really enjoy the time on the water. With their combination of design innovation combined with quality fittings, excellent stability and performance ratio, they are excellent kayaks giving superb handling for your most ambitious excursions and outings.

Ergonomics

The seat ergonomics have been specially designed for optimum paddle comfort.

The included back rests are inclined towards the rear to prevent the pelvis from being pushed forwards which also relaxes the legs by relieving pressure against the foot rests. Optional Seats provide for additional comfort for longer trips.

The center of gravity is set low down for improved stability, but above the flotation line so that the bottom of the seats stays dry.

Hull Design

The Triple Hull Design provides excellent maneuverability while retaining maximum stability without slowing its forward speed. Based off the shape of a trimaran construction, the shape features a large central section with narrow water channels to optimize glide and two outer hull sections that give the boat stability. The two concave sections improve the overall performance. This makes a full day of kayaking enjoyable causing less fatigue for the kayaker enabling you to explore more places.

Key Features

- Triple Hull Design for excellent steering control and great performance in sea conditions
- Ergonomic Seats for easy paddling and comfort
- Large rear storage area with elastic straps, carry more gear for long trips or fishing, all within easy reach
- Storage area in front including bungee cord
- 2 large hatches for additional storage for trips
- Can be used for Fishing as well as an Adventure Kayak
- Adaptable for Solo Paddling
- Includes two (2) flush mounted rod holders with caps

CORAL REEF EXPLORER

Suggested Retail \$ 45,900

Please Contact Dealer for Local Tax and Delivery Costs

PN: CRE700

Once you take out a **CORAL REEF EXPLORER**, your kayaking/canoeing sessions will never be the same. The canoes are totally transparent which means that when you take it out on the water, you can enjoy more views than just the ocean's surface, you can see underwater or underneath your canoe to be more specific. A two seat canoe that is easily converted to one seat in a matter of seconds.

The **CORAL REEF EXPLORER** features durable yet lightweight construction and is designed for conditions ranging from totally flat to breezy and choppy waters. With a removable frame, seats and inflatable chambers allow for easy stacking, storage and transportation.

Featuring an advanced polymer hull and corrosion-resistant hardware, this kayak is sure to turn heads and is a favorite on the water. This innovative product is actually a canoe-kayak made from a clear polycarbonate material called Lexan.

It penetrates the surface tension of the water allowing an unobstructed view of the sea life below from the dry safety of your kayak. The eleven feet long, three feet wide boats can accommodate up to two people. Thanks to its high sides and low center of gravity, it's easy to use even for beginners.

Hull Design

Made of durable Polycarbonate with UV Protection, the Hull Design provides excellent maneuverability while retaining maximum stability without slowing its forward speed. Based off the shape of a mono-hull sail boat, the shape features a large central

section that slices through the water while giving the boat stability. This makes a full day of kayaking enjoyable causing less fatigue for the kayaker enabling you to explore more places.

Key Features

- Mono-Hull Design for excellent steering control and great performance in sea conditions
- 2 Deluxe Back Rests Included
- 2 Paddles Included
- 2 Air Floats Included
- Light Weight and maneuverable
- Light Weight for easy transportation
- Completely Transparent
- UV protected to prevent yellowing
- Frame is Anodized Aluminum
